Sequential improvements during double 11

- Resilient online sales growth during double 11, where Tik Tok, PDD and JD platforms continued to outperform. Based on our channel check and CMBI est., the online GMV growth during 2022's double 11 was at ~14% YoY, inline with CMBI est. and beat market expectation, similar to online sales growth in Sep 2022 and had picked up vs Oct 2022. In terms of platforms, YoY growth for Alibaba (Tmall + Tao Bao)/ JD/ PDD/ TikTok increased by ~flattish/ ~teens/ 27%/ 38%. Moreover, based on our channel check, the refund ratio improved vs last year (by about 2-3ppt) as well, thanks to faster delivery time to consumers, as many brands have better inventory allocations (more localized warehouses).
- Sportswear outperformed on Alibaba platforms while home appliances did better on JD. According to our channel check, the online GMV growth during double 11 for Sportswear/ Apparel/ Home appliances were at ~14%/ 7%/ 3% YoY on Alibaba-platforms and at ~10%/ 11%/ 16% YoY on JD platforms.
- Overseas brands had caught up in growth vs domestic brands. Based on our channel check, the online GMV growth during double 11 for Nike/ Adidas/ FILA/ Anta/ Li Ning/ Xtep/ 361 Degrees were at ~26%/ 24%/ 17%/ 30%/ 31%/ 21%/ 18% on Alibaba-platforms and at ~ 19%/ 16%/ 13%/ 21%/ 27%/ 18%/ 13% on JD platforms. Noted that, we believe the actual growth should be even faster, as it will include the contribution from channels like Tik Tok. For example, Xtep has registered about 30% GMV growth during double 11. As a whole, the blended growth rates are fairly similar between the overseas brands (21%) vs domestic brands (21%). We believe the accelerated growth rates for overseas brands were boosted by their more aggressive discounting and increased marketing budgets with Alibaba and JD platforms.
- However, we should still be cautious about the retail discounts and hence the GP margins. In order to boost consumption and clear inventories, all e-commerce platforms rolled out greater promotions (RMB 50 off per RMB 300 spending vs RMB 30 off per RMB 200 last year). But on top of this, the actual blended retail discounts rates (based on final transactions) are also higher at 24%-25% off in 2022 vs about 18%-19% off in 2021 (20%-25% off/ 25%-30% off for new/ old products in 2022 vs 15%-20% off/ 22%-25% off in 2021).
- Closing our long Anta and short Li Ning pair trade idea and our new pecking order is now Li Ning (2331 HK) > Xtep (1368 HK) > Anta (2020 HK) > Topsports (6110 HK) = 361 Degrees (1361 HK) > Pou Sheng (3813 HK). We believe our pair trade call had been profitable since 18 Oct 2022, but we are now closing it, as Li Ning's sales growth had improved in Nov 2022. Therefore, we are now suggesting investors to long Li Ning (2331 HK), Xtep (1368 HK), Anta (2020 HK) with 1 month outlook but stay cautious in 3 months.

- Sentiment might continue to improve in 4Q22E. While we are certain the offline sales will be dragged by covid-19 outbreaks in Guangzhou and recently in Beijing, the improved online sales growth, the relaxation of social distancing policies, the constructive meeting between China and US/ Germany, as well as the upcoming world cup, we believe the sentiment could continue to improve and perhaps can drive up consumer discretionary sector valuation.
- But we are still conservative on the FY23E outlook and fundamentals. Fundamentally speaking, there are many reasons for us to stay conservative, namely: 1) sales growth were not as sustainable during the second half of the double 11 festival, we believe that was a result of sluggish economic and income growth, higher than usual unemployment rates (esp. for younger generations) and negative wealth effects (both stock and property markets), 2) earlier than last year Chinese New Year 2023 (in late Jan) and 3) relatively high inventory level, as the de-stocking activities could last until 2Q23E.
